

Семерингите COMBI са свързани с метални рамки с вътрешни уплътнителни пръстени и полиуретанови дефлектори.

Това дава голяма способност на семеринга да образува бариера срещу замърсяване. Полиуретановата част създава допълнителна бариера срещу външни примеси и прави комбинираното уплътнение високо надеждно.
